

Question:

What is the difference between Soft Flex® Wire and Soft Touch™ Wire?

Answer: FLEXIBILITY

Soft Touch™ Wire is just as strong as the original Soft Flex® Wire, but is more flexible and drapes more like a thread.

Soft Touch™ Wire is available in 4 diameters, .010, .014, .019, and .024, with each spool clearly marking its appropriate use, right on the label. Constructed of either 7, 21, or 49 micro woven stainless steel wires, Soft Touch™ Wire is so soft, you will not believe it is wire! It offers the same great performance as our original Soft Flex® Wire, but with 50% more suppleness, giving more life and movement to your jewelry designs.

The original Soft Flex® Wire is still wonderful. Sometimes a designer will want more body and more shape in their design. It comes in a huge array of colors. In such a colorful craft, colored wire can be very important.

DIAMETER DESCRIPTIONS FOR WIRE

Very Fine .010 Diameter (0.254 mm)

Ideal for embellishing, weaving, crocheting and stringing very small beads

Fine .014 Diameter (0.355 mm)

Ideal for soft materials, seed beads and fresh water pearls

Medium .019 Diameter (0.482 mm)
